

A Treatment Program **to fit your needs**

Most people see dramatic results after one Dermaglow® treatment. However, for optimal results, your skin care professional may recommend a series for your specific needs that will include a designated number of treatments and the time intervals between each treatment.

Post Treatment

Immediately following the Dermaglow® treatment, residual microcrystals are brushed off and the area is cleansed and rinsed. A soothing moisturizing agent with sunscreen is then applied to help protect the skin. A slight windburn sensation may be experienced. You can return to your daily activities immediately after treatment.

How?

sometimes beauty is skin deep

Dermaglow® delivers a controlled stream of microcrystals over the skin through a special hand piece. By gently polishing the skin and removing dead cells, oils and other buildup, it is possible to improve many skin conditions and the imperfections that lead to premature aging.

The Dermaglow® treatment takes 15-30 minutes depending upon the areas being treated.

Why?

Age, sun, diet and environment are a few of the factors that lead to skin deterioration on the face and other parts of the body. Now with Dermaglow® particle skin exfoliation technology, there is a safe and gentle way to help rejuvenate, smooth and repair your skin. This form of microdermabrasion has been adopted as the treatment of choice in the United States, making it the most requested non-surgical procedure.

The Dermaglow® particle skin exfoliation treatment is ideal for both men and women seeking to turn back the effects of time and desiring healthy younger-looking skin. This treatment is ideal for people who are unwilling or unable to undergo existing laser or chemical treatments, due to high cost, potential side effects, discomfort and long recovery period.

Safe and Effective

The DERMAGLOW® procedure has been shown to be safe and effective for the cosmetic reduction of:

- Fine lines and wrinkles
- Sun-damaged skin
- Acne/Acne scars
- Excess oils
- Blackheads/Whiteheads
- Pore size
- Superficial age spots
